

# LUNAE

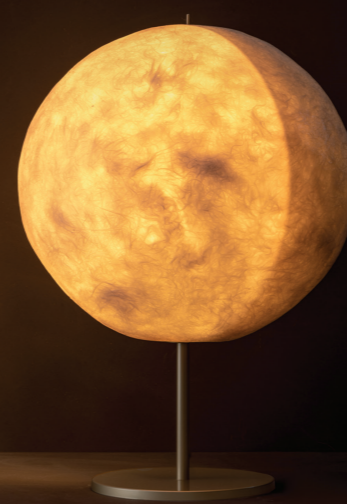

design Gianfranco Marabese 2021

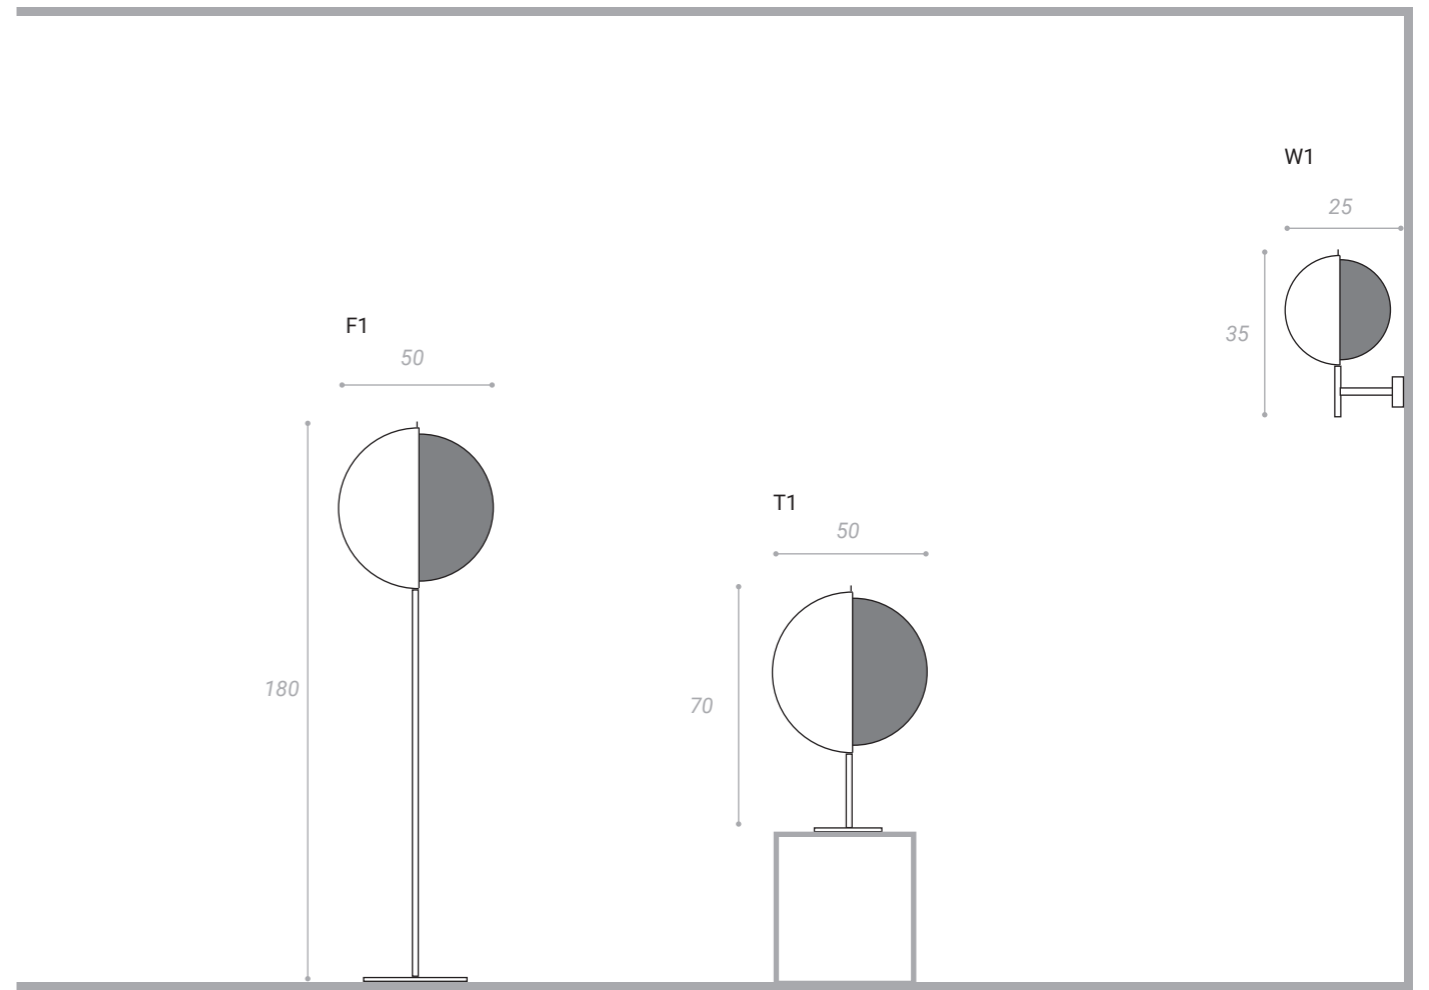

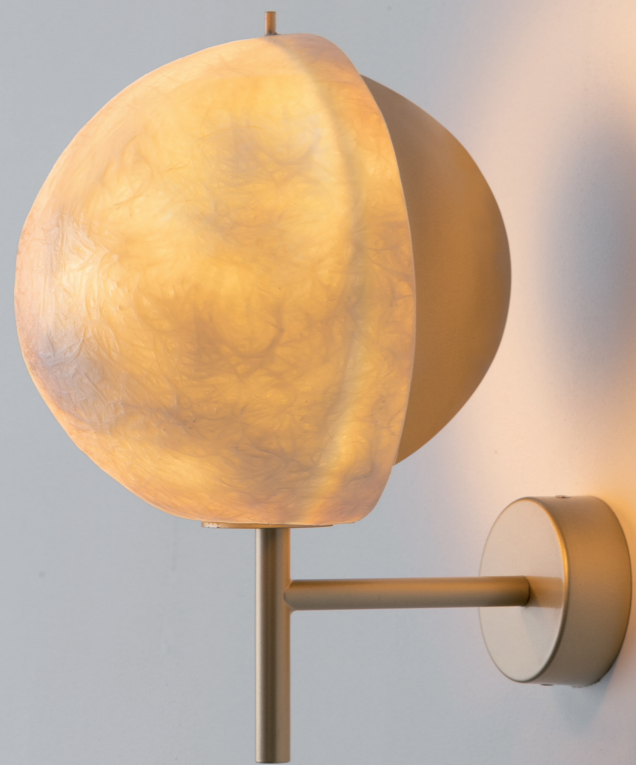

Un diffusore in fibra di vetro manifesta una superficie materica retro illuminata, che ricorda, l'immagine del suolo lunare. La rotazione su un'asse verticale di una 'controfigura' posta sul retro del diffusore consente di creare disegni che evocano le fasi lunari, creando differenti proiezioni di luce. L'interazione fra il prodotto e il suo fruitore permette di ottenere suggestive, magiche atmosfere.

A fibreglass diffuser shows a backlit material surface that by highlighting the material immediately recalls the image of the lunar territory. The rotation on a vertical axis of a 'stand-in' placed on the back of the diffuser allows to obtain evocative moon's phases, producing different light projections. The interaction between the product and its user allows to obtain evocative, magical atmospheres.
